

Construction Technology Transcript

00:00:03:02 - 00:00:13:08

Brogan Sutterlin

I chose construction technology because I knew that the office environment was not for me. I wanted to work hands on and use my skills for my career.

00:00:13:13 - 00:00:24:16

Carissa Schubert

We've been using circular saws, jigsaws, lots of other types of saws, hammers, different types of nails, screws like drills and stuff.

00:00:24:20 - 00:00:56:05

Brogan Sutterlin

In my first year of construction, I've learned siding, roofing, stairs, rough carpentry for the heavy machinery. We've used simulators in the classroom, and then we've gone out into the backyard where we've actually operated. Machines learn how to dig and learn how the controls work. A typical day starts off in the classroom, learning on our computers from Jerry on the whiteboard, and then we'll move out into the pole barn where we'll work with tools.

00:00:56:11 - 00:01:00:15

Brogan Sutterlin

He'll demonstrate, and then we'll hands on start our own projects.

00:01:00:21 - 00:01:12:13

Carissa Schubert

Jerry's the best teacher I've probably had, and he's really funny. He's. I don't know. He's just like, fun to be around. He makes the whole environment, really fun and exciting.

00:01:12:14 - 00:01:26:09

Brogan Sutterlin

I think this is a great program because it brings kids together with a lot of the same interests and it changes learning from being into a school environment where you're out in the shop, you're with your friends and you're learning what you're interested in.

00:01:26:17 - 00:01:34:20

Carissa Schubert

Even if you're not really into woodworking, I think you'll just enjoy it. The class in general.
