

## Cybersecurity & Digital Forensics Transcript

00:00:03:15 - 00:00:14:11

Isabelle Marks

I chose this program because my dad is a programmer and also I wanted to get involved in a more male dominated field. Women have a lot of opportunities in this field.

00:00:14:19 - 00:00:24:13

Lucas Wisuri

Probably my favorite things in this class so far is being able to learn how to put a computer together and be able to program it, to be able to do whatever I need it to do.

00:00:24:15 - 00:00:39:03

Isabelle Marks

Skills I learned from this program are networking I.T. essentials, ethical hacking. And we've also done a lot of clubs that have helped prepare me for like real world situations.

00:00:39:04 - 00:01:09:00

Lucas Wisuri

The equipment that we have access to is multiple routers and switches as well as every part that you have for computers. Typically, we'll walk in, we'll have a couple of minutes just to be able to talk with each other, and then we'll listen to the news and see what's new with tech. And then we'll go through and we'll do an assignment after that, we'll take a little break, and then we'll follow it up with a lab to where it will either be working on hands on, or we also have labs on a computer that's like a software.

00:01:09:00 - 00:01:28:19

Isabelle Marks

If you're considering this program, I would say don't be intimidated, especially if you're a woman. I'm one of the two women in my class, and I thought it was going to be a lot scarier than it actually is, it opened up so many doors for opportunities. You get so many scholarships, you get certifications and certificates, and there's a ton of opportunity in this field.

00:01:28:19 - 00:01:37:13

Isabelle Marks

The real world experience, you get to join all these clubs. So I'd say just go for it.
